

GOING "GREEN" BY UTILIZING RENEWABLE ENERGY

McKee Door Sales, partnered with Pentalift Equipment, is pleased to offer the:

Solar Powered Hydraulic Dock Leveler

The Pentalift SolarDock provides all the benefits of hydraulic dock leveler operation with the additional benefit of utilizing solar energy as the power source. This couples unmatched energy efficiency at the loading dock with the superior performance of hydraulic operation, yielding cost savings and fitting with "green" profiles and directives that are desired and/or mandated. Utilizing a solar cell, the Pentalift SolarDock eliminates expensive dedicated power supply requirements. A local 115/1/60 plug-in supply is required to accommodate the low current (less than one amp) AC auxiliary charger.

Benefits

- A solar cell charges the battery. To activate the dock leveler, the accumulated power is used to operate the DC power unit
- Electrical installation cost savings. A dedicated power supply is not required. Costs associated with providing and installing the dedicated power supply are eliminated. A 115/1/60 wall plug for the ancillary AC charger is provided. Power draw is less than one amp
- An auto charging feature is available that senses the charge status of the battery and automatically turns on the AC charger to replenish the charge in the battery, then automatically turns off the AC charger and reverts back to the solar cell charging system
- The solar energy supply and the battery allow the SolarDock to continue to function during power interruptions to the facilities incoming power grid
- Operated by a simple push button control

The Pentalift SolarDock is a product like no other. Many competitors will try to compare it to their "Air Powered" leveler. Click the link to the document below on "Hydraulic vs. Air Powered" levelers.
